Background

With all of its natural resources, rich culture, and storied history, Africa has often found itself behind when it comes to technological advancements, science and innovation. This problem domain has oftentimes led to a lack of sustainable growth for the continent. Africa has many brilliant minds and creatives who simply lack the opportunity to showcase their genius. This is why the Africeum project was created.. Africeum looks to be the largest NFT marketplace where Africans of all nations can mint, sell, and trade their artwork. The artwork will be marketed to countries in the West via FB/IG ads, Google Ads and Youtube promotions. By doing so, Africeum hopes to bridge the wealth gap and create opportunities for artists in Africa to earn a sustainable living by showcasing and selling their work as NFT's.

Problem Domain

The Africeum Project

The goal of the Africeum project is to create an NFT marketplace where African artists of all nations can freely, and easily mint, sell, and produce high quality NFT's that showcase the rich culture that Africa has to offer. Africeum will introduce NFT's on a larger scale by creating a platform where people looking to buy and support African art can be connected with the African creatives themselves. . This creates a

vast opportunity to create sustainable income for local artists in Africa as well as push the artwork itself beyond the continent. Making the Africeum Marketplace more mainstream starts with educating people on the core concepts, as well as making it easily accessible to mint, sell and trade NFT's.

As part of Africeum's social commitment, Africeum will donate a percentage of all proceeds to causes such as technology education, wildlife conservation, education, job acquisition and accessible clean water projects.

Africeum Token:

Token Overview

The Crypto market has introduced new ways of building distributed infrastructure through the use of tokens. The Africeum team came together to build and fund a vision that we truly believe can change the world for the better. The Africeum token is what powers the Africeum ecosystem. All transactions including purchasing, sales and payments will be made via the Africeum token. This creates real world utility and produces scarcity for the Africeum Token. The platform will also have staking as a way to bolster the network and reduce the amount of tokens in circulation. In addition to utility, the token itself is able to be burned as a deflationary mechanism. Africeum is built on the Binance (BNB) Smart Chain platform with three main functions:

- As a tradable Crypto Token on the open market.
- As a means of paying for all transactions on the NFT marketplace
- As a crypto token, users can stake their tokens to earn rewards

4

Aside from these, Africeum (AFC) will open up to all financial and any other industries. Africeum will not limit the usage of AFC nor business entities that would

like to use AFC for their businesses. Therefore, any companies or organizations, individuals may be able to utilize AFC as a crypto token just like Bitcoin and Ethereum's ETH.

Token Utility

All purchases and sales of any NFT artwork will be paid using the Africeum token. In addition to the transaction, any fees associated will also be paid in the native Africeum Token. In addition to the transactions, staking of the Africeum Token will also be available on the platform as a way of incentivizing holders. Holders who stake Africeum will receive additional Africeum tokens.

Listed Tradable Assets

AFC is tradeable currently, Pancakeswap. Africeum has plans to list on other centralized exchanges in the near future. Exchange listings will be done incrementally as Africeum gains more traction and trading volume.

Exclusive Owner Benefits

As an added incentive, AFC owners will receive periodic promotions to earn rewards such as preferential access to new products/services, and opportunities.

Token Specifications

Token Name: Africeum

Symbol AFC

Issuance Amount 100,000,000
Particulars BEP 20 Binance Smart Chain
Maximum Token Offered 100,000,000 AFC

Use of Proceeds Section 4.4

Token Info

Africeum is currently trading on PancakeSwap. The contract address is 0xb9bFE9241aCFFBe7f5B06C4e668c4a43b8431D3a.
